The software stack within autonomous driving systems must be able to efficiently handle demanding and complex real-time processing requirements while minimizing power consumption.

**DEMO DESCRIPTION**

This demo showcases how the Intel® GO™ Automotive Software Development Kit (SDK) helps developers and system designers maximize hardware capabilities while speeding the pace of development. It examines how the included tools shorten the learning curve for developers creating autonomous driving solutions.

**KEY POINTS**

- Intel GO Automotive SDK speeds software development
- Empowers developers to create solutions for a range of market needs
- Supports data center capabilities for autonomous driving
